To whom it may concern,

I decided to switch from OpenPGP usage to modern age
usage and therefore publish my public age key here
on GitHub, in this eIDAS conform and certified .pdf
document.

My public age key:

age1k9uru07mqpy3jhmn9djkka4euh6c8j5s0ur56vrnhzxgmznm2d5qtjqles

You will find age on GitHub at the following link:

https://github.com/FiloSottile/age

Please note: My age key pair is stored for encryption
and decryption usage on an *offline* usage device only.
